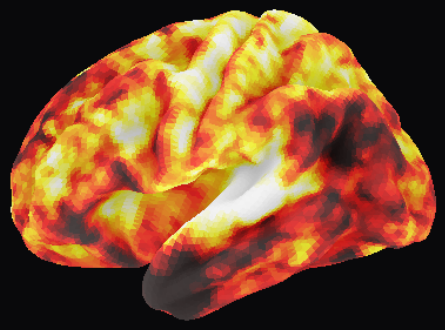
TRIBE v2 Brain Encoding Analysis

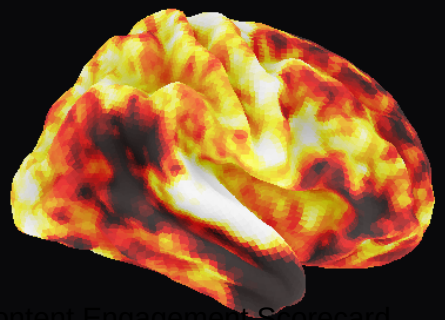
MULTITUDE MEDIA | Cognitive Impact Report



Left Hemisphere

Language, speech, and analytical processing

Activation: 13.9%



Right Hemisphere

Creativity, emotion, and spatial awareness

Activation: 12.6%

Content Engagement Scorecard

Stimulus: CoComelon tested videos on live babies. Meta just open sourced a way to test content on a digital copy of the human brain. TRIBE v2. Seven hundred bra...

Overall Neural Engagement: 4/100 (F)

Top-Down View

Motor planning, attention, and focus

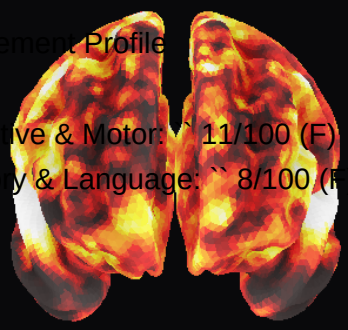
Activation: 12.9%

Category Breakdown

Cognitive System	Score	Grade	What It Measures
Executive & Motor	11/100	F	Active thinking, problem-solving, and action impulse
Auditory & Language	8/100	F	Speech comprehension, voice impact, and word meaning
Attention & Spatial	1/100	F	Sustained focus and spatial awareness engagement
Visual Processing	0/100	F	How strongly visuals capture attention (faces, motion, color)
Emotion & Decision	0/100	F	Emotional resonance, trust, reward, and persuasion

Engagement Profile

- Executive & Motor: `` 11/100 (F)
- Auditory & Language: `` 8/100 (F)



Front View

Decision-making, social cognition, and impulse control

Activation: 13.0%

Brain Laterality

Hemisphere	Activation	Processes
Left Brain	0.00280	Language, logic, analytical thinking, speech
Right Brain	-0.00971	Creativity, emotion, spatial awareness, music

Left-brain dominant (laterality: +1.000) This content engages analytical and language processing more than emotional/creative circuits. Typical of speech-heavy, informational, or text-based content.

TRIBE v2 Brain Encoding Analysis

MULTITUDE MEDIA | Cognitive Impact Report

Predictive Insights

Metric	Prediction	Confidence
Watch-Through Rate	98% of viewers will finish	High
24hr Ad Recall	10% recall probability	Low
Purchase/Action Intent	5/100	Weak
Virality / Shareability	5/100	Low Share Potential
Cognitive Load	7/100 (Low)	
Optimal Content Length	~13s	Based on attention decay
Best Content Fit	Educational	Based on cognitive profile

Key Findings

Strongest signal: Executive & Motor (F). This content triggers active cognitive processing the viewer is thinking and analyzing.

Weakest signal: Emotion & Decision (F). Low emotional activation means this content informs but doesn't persuade.

AI Strategic Action Plan

Based on your neural encoding profile, here is exactly how to optimize this content for higher engagement:

1. Elevate Emotional Resonance: Your emotional activation is lagging. Introduce a human element earlier (faces, eyes), raise the stakes with a clear conflict or problem-statement, and consider using a subtle background music track that swells during key points.

2. Stimulate the Visual Cortex: The brain is not actively tracking your visuals. Break visual monotony by changing camera angles every 3-5 seconds, adding dynamic text overlays (B-roll, captions), or ensuring high color contrast in your framing.

3. Enhance Auditory Processing: The auditory cortex is under-stimulated. Use vocal intonation and pacing shifts to emphasize important words. Eliminate background noise and consider subtle sound effects (whooshes, pops) during visual transitions.

4. Command Focused Attention: Viewers are passively watching. Force active attention by breaking the

fourth wall (direct eye contact), asking a rhetorical question, or using a 'pattern interrupt' (a sudden visual/audio shift) in the first 3 seconds.

5. Trigger Deep Thinking: The content is being consumed too passively. Challenge the viewer's assumptions, present a surprising statistic, or frame your message as a 'secret' or 'counter-intuitive truth' to force the executive network to engage.

6. Drive Action Intent: To push the brain from 'watching' to 'acting', you must explicitly state what the user should do next. Pair a clear, urgent Call-To-Action (CTA) with a visual of the desired outcome.

7. Engineer Shareability: To make this spread organically, it needs a higher 'Social Currency' trigger. Frame the core message as something the viewer would look smart for sharing with a friend.

Bottom Line

4/100 Needs Work. Weak engagement. Major revisions recommended.
